

## Engineering STA Request

This request for special temporary authority is to modify KYCW's existing engineering STA. The station is currently operating on Channel 19 at the parameters specified in File No. 0000053968. The antenna used by KYCW must be moved to a lower position on the tower in order to allow another station to begin construction of its top-mount repack facility. The antenna is scheduled to be lowered the week of July 9; KYCW requests authority to begin operating from the lower height effective July 9, 2018.
