Incentive Auction Channel Reassignment

Application for Minor Modification of Digital Television Station Construction Permit

prepared for

Detroit Television Station WKBD Inc.

WKBD-TV Detroit, MI

Facility ID 51570

Ch. 34 285 kW 291 m

*Detroit Television Station WKBD Inc. (“DTSW”) is the licensee of digital television station WKBD-TV, Channel 14, Facility ID 51570, Detroit, MI. Reassignment of WKBD-TV from Channel 14 to Channel 34 was specified in the *Incentive Auction Closing and Channel Reassignment Public Notice* (“CCRPN”, DA 17-317, released April 13, 2017). A Construction Permit (“CP” file# 0000034396) authorizes WKBD-TV to operate on Channel 34 at 285 kW effective radiated power (“ERP”) with a directional antenna top-mounted at 295 meters height above average terrain (“HAAT”). DTSW proposes herein a minor modification of the reassignment CP to reduce the antenna’s height. No other changes are sought.*

The existing Channel 14 facility employs a side-mount antenna located just beneath the candelabra of the WKBD-TV tower. The tower structure corresponds to FCC Antenna Structure Registration number 1007996. As with the current authorization, the proposed Channel 34 antenna will be installed above the candelabra at a top-mount position. The final configuration above the candelabra will place the antenna’s center of radiation at 309.7 meters above ground level, which is a 4.5 meter reduction from that which is currently authorized. The proposed antenna HAAT is 291 meters (290.6 meters, unrounded). No change in ERP or directional antenna is proposed, and no change to the overall structure height will result.

The proposed antenna is an elliptically polarized Dielectric model TFU-18GTH/VP-R 4C180 (25 percent vertical polarization). The maximum horizontally polarized ERP is 285 kW and the maximum vertically polarized ERP is 71.25 kW. The vertically polarized component

will not exceed the horizontally polarized component at any azimuth. The directional antenna's azimuthal patterns are depicted in Figures 1 and 1A for horizontal and vertical polarization, respectively. The antenna's elevation pattern is depicted in Figure 2.

Figure 3 supplies a map that demonstrates compliance with §73.625(a)(1) regarding coverage of the entire principal community. The proposed facility's predicted population exceeds 95 percent of the *CCRPN* baseline facility's population.

At 285 kW ERP / 295 m HAAT, the presently authorized WKBD-TV noise limited service contour ("NLSC") extends beyond that of the *CCRPN* facility and resulted from a minor modification application filed during the second filing window.¹ The height reduction sought herein provides an NLSC which also exceeds that of the *CCRPN* facility but is within that of the present authorization. A comparison map of the WKBD-TV authorized, proposed, and reassignment NLSC is provided as Figure 4. Therefore, the proposal complies with the FCC's NLSC expansion "freeze" Public Notice² of April 5, 2013 (DA 13-618) to the extent it may be applicable to reassigned stations such as WKBD-TV.

Interference study per FCC OET Bulletin 69³ shows that the proposal complies with the 0.5 percent limit of new interference caused to pertinent nearby post-auction full service and Class A television stations and reassessments as required by §73.616. The interference study output report is provided as Table 1.

¹Public Notice "Incentive Auction Task Force and Media Bureau Announce the Opening of the Second Filing Window for Eligible Full Power and Class A Television Station—October 3 Through November 2, 2017" DA 17-911, released September 20, 2017.

²"Media Bureau Announces Limitations on the Filing and Processing of Full Power and Class A Television Station Modification Applications, Effective Immediately, and Reminds Stations of Spectrum Act Preservation Mandate," DA 13-618, Public Notice, released April 5, 2013.

³FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 2 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCCs implementation of TVStudy show excellent correlation.

The site location is within the Canadian coordination zone (27 km to the Canada border). No further coordination with Canada should be required, since the proposal merely seeks to reduce the antenna height of an existing authorization and no extension of NLSC will result.

The nearest FCC monitoring station is 218 km distant at Allegan, MI. This exceeds by a large margin the threshold minimum distance specified in §73.1030(c)(3) that would suggest consideration of the monitoring station. The site is not located within the areas requiring coordination with “quiet” zones specified in §73.1030(a) and (b). There are no authorized AM stations within 3 kilometers of the site.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the FCC’s OET Bulletin Number 65. Based on OET-65 equation (10), and considering 10 percent antenna relative field in downward elevations (pattern data shows less than 10 percent relative field at angles 15 to 90 degrees below the antenna), the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is $1.3 \mu\text{W/cm}^2$, which is 0.3 percent of the general population/uncontrolled maximum permitted exposure limit. This is well below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal’s contribution is less than five percent.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC’s guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This exhibit is limited to the evaluation of exposure to RF electromagnetic field. No increase in structure height is proposed.

Section	Question	Response
Proposed Community of License	Facility ID	51570
	State	Michigan
	City	DETROIT
	DTV Channel	34
Facility Type	Facility Type	Commercial
	Station Type	Main
Zone	Zone	1

Section	Question	Response
Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?	Yes
	ASR Number	1007996
Coordinates (NAD83)	Latitude	42° 29' 01.0" N+
	Longitude	083° 18' 44.0" W-
	Structure Type	GTOWER-Guyed Structure Used for Communication Purposes
	Overall Structure Height	320.9 meters
	Support Structure Height	304.3 meters
Antenna Data	Ground Elevation (AMSL)	212.5 meters
	Height of Radiation Center Above Ground Level	309.7 meters
	Height of Radiation Center Above Average Terrain	290.6 meters
	Height of Radiation Center Above Mean Sea Level	522.2 meters
	Effective Radiated Power	285 kW

Antenna Technical Data	Section	Question	Response
	Antenna Type	Antenna Type	Directional Custom
		Do you have an Antenna ID?	Yes
		Antenna ID	1002289
	Antenna Manufacturer and Model	Manufacturer:	DIE
		Model	TFU-18GTH/VP-R 4C180
		Rotation	0 degrees
		Electrical Beam Tilt	1
		Mechanical Beam Tilt	Not Applicable
		toward azimuth	
	Polarization	Elliptical	
	DTV and DTS: Elevation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
		Uploaded file for elevation antenna (or radiation) pattern data	

Directional Antenna Relative Field Values (Pre-rotated Pattern)

Degree	V _A (Authorized Value)						
0	0.510	90	0.796	180	0.773	270	0.513
10	0.626	100	0.854	190	0.775	280	0.442
20	0.757	110	0.925	200	0.805	290	0.439

80	0.784	170	0.809	260	0.619	350	0.450

Additional Azimuths

Degree	V _A

Construction Permit Certifications	Section	Question	Response
	Post-Incentive Auction Expedited Processing	It will operate on the DTV channel for this station as established in the post-incentive auction channel reassignment public notice.	Yes
		It will operate post-incentive auction facilities that do not expand the noise-limited service contour in any direction beyond that established by the post-incentive auction channel reassignment public notice.	No
		It will operate post-incentive auction facilities that match or reduce by no more than five percent with respect to predicted population from those defined in the post-incentive auction channel reassignment public notice.	Yes
		The antenna structure to be used by this facility has been registered by the Commission and will not require re-registration to support the proposed antenna, OR the FAA has previously determined that the proposed structure will not adversely affect safety in air navigation and this structure qualifies for later registration under the Commission's phased registration plan, OR the proposed installation on this structure does not require notification to the FAA pursuant to 47 C.F.R. Section 17.7.	Yes
	Environmental Effect	Would a Commission grant of Authorization for this location be an action which may have a significant environmental effect? (See Section 1.1306 of 47 C.F.R.)	No
	Broadcast Facility	The proposed facility complies with the applicable engineering standards and assignment requirements of 47 C.F.R. Sections 73.616, 73.622(i), 73.623(e), 73.625, 73.1030, and 73.1125.	Yes
