

Request for Extension of Reduced Power STA

The licensee respectfully requests extension of reduced power STA most recently granted in February 2018 (*see* LMS File No. [0000043957](#)) for 5.85 kW ERP, which is 45% of normal operations.

As we previously advised, finding parts to restore full operation of the facility has proven to be challenging given its age. As a result, the licensee now seeks an extension of STA for ongoing reduced power operations. The facility is an analog facility on an out-of-core channel, which means that any further efforts to fully restore normal operations would result in sunk costs and require the abandonment of capital. Because the facility is displaced, the licensee filed a displacement CP application in the Special Displacement Window. *See* LMS File No. [0000053201](#).

Accordingly, the licensee requests STA to operate at the reduced power level of 5.85 kW until such time as the licensee has obtained authority to construct and has begun operating the facility on a new channel. Grant of this request is in the public interest because it maintains service to the public (albeit at reduced power).
