

Amendment by Minnesota Valley TV Improvement Corporation
to Displacement Application File No. 53709 for Facility ID 43003

Minnesota Valley TV Improvement Corporation ("MVTV") hereby amends its application (File No. 53709) for displacement of LPTV Station K41MF-D, Granite Falls, MN (Fac. ID 43003), to Channel 31, by including separately attached copies of letters from Renville TV Improvement Corporation ("Renville") and Edge Spectrum, Inc. ("Edge"), each of which has a pending displacement application proposing operation on Channel 31. (See File No. 53920 for Renville's application, and File No. 54341 for Edge's application). The Renville and Edge co-channel displacement applications are mutually exclusive ("MX") with MVTV's displacement application.

In the case of Renville, its letter states that it does not object to the grant of MVTV's displacement application and will accept interference from MVTV's proposed Channel 31 facility. (MVTV has provided a similar letter to Renville, accepting interference from its proposed Channel 31 facility.)

In the case of Edge, its letter states that it does not object to the grant of either MVTV's application or Renville's application because Edge plans to amend its application File No. 54341 to propose a different operating channel when the Commission allows such amendments to be filed during an upcoming settlement window.

The attached two letters received from Renville and Edge, and MVTV's reciprocal letter to Renville, resolve the MX among these applications. It is hoped that MVTV's application File No. 53709 may now be further processed. If the Commission should determine that MVTV's application cannot be further processed until Edge's amendment to change to a new operating channel is filed during the settlement window, it is respectfully requested that the Commission grant MVTV's pending request for special temporary authority (File No. **55364**) to operate K41MF-D on Channel 31 until MVTV's application File No. 53709 can be processed to grant.
