REASON FOR GOING SILENT

WNYX-LD stopped transmitting on its now licensed facilities on November 5, 2018. The conversion of WNYX-LD from Channel 43 to Channel 10 required the installation of a VHF rather than a UHF transmitting antenna, which in turn required a new arrangement with the manager of the transmitter site.

The paper work for the Channel 10 antenna site is in progress; but the site is managed by a large organization, and the documents have not yet been completed or signed.

Because the construction permit expiration date was imminent, the site owner permitted installation of the antenna and transmitter and activation of the transmitter for a short period of time; but now that the construction has been completed and the license application filed (and now granted) they will not permit continued operation until after a new site access lease or license has been signed.

Operation was suspended on November 5, 2018, and will resume as soon as the site manager permits it.
