This letter is intended to confirm that Electronics Research, Inc. (ERI) has the capacity to complete the installation the RF antenna and transmission line for WLGA by May 29, 2019. This will not prevent Electronics Research, Inc. (ERI) from fulfilling other orders or other customer commitments required for earlier Phases.

ERI has made significant investments in facilities, equipment, and personnel in advance of the FCC's final transition plan and has made the preparations necessary to make this commitment to WLGA and to other television broadcasters that are required to modify their transmission facilities as a result of the FCC Incentive Auction. In other words, ERI has prepared for this increase in demand for its products and services and can accommodate WLGA's desire to complete its transition by the above stated date without impacting its ability to meet other FCC Repack related obligations.

The WLGA requirements for this DTS site, however, require ERI to source certain antenna elements including the panels to be purchased from our partner manufacturer. For this reason, an order must be received no later than November 30, 2018 to assure that we can meet our commitment above.

Should you have any question, please feel free to contact us for any further clarifications.

Respectfully submitted,

Joe Wozniak
