

**K46AK-D Prineville, Etc., Oregon  
Facility ID 34864**

**Amendment  
to  
Request for Special Temporary Authority**

Sander Operating Co, III LLC (“Sander”) amends its request for Special Temporary Authority (“STA”) to operate K46AK-D on its displacement channel (See File Number 0000054538). The request is amended to use a temporary antenna until the permanent antenna can be delivered and installed.

As previously stated, K46AK-D received a letter notification from T-Mobile “to cease operations” on its current channel “or eliminate the potential for harmful interference... .” Consequently, Sander filed an application in the displacement window to change from Channel 46 to Channel 19. The displacement application was granted on July 31, 2018.

Due to changes in the ordering process/source for the antenna proposed in the displacement application, delivery and construction of the permanent antenna will be delayed. In light of T-Mobile’s anticipated operations, Sander requests temporary authority to operate the translator on the displacement channel using a temporary antenna with the operating parameters described in this amended request. The temporary antenna is a composite antenna consisting of the licensed antenna (Scala 4DR-16-2HW) modified to replace the standard 4DR panels with Kathrein K723147 panels. The composite azimuth pattern of this custom array will fall within the envelope of the licensed azimuth pattern.

Grant of this STA request will allow K46AK-D to continue to serve the public while also eliminating the potential for harmful interference to proposed T- Mobile operations.
