

Environmental Study

K11WP-D

2/24/2019

The applicant proposes locating on top of a building at the top of a 7-meter-tall tower on the building. The applicant proposes using a log periodic antenna with little downward radiation at a power level of 70 watts ERP. The area around the tower is fenced. This proposal is well within the Commission's guidelines for both controlled and uncontrolled access. Nevertheless, placards warning of radiation hazard will be posted in and around the site at all times. Also, station staff will be trained how to turn off the transmitter in the event that anyone climbs the tower.
