

**STATEMENT OF JOHN E. HIDLE, P.E.  
IN SUPPORT OF AN  
APPLICATION FOR A MINOR MODIFICATION OF A  
POST REPACK CONSTRUCTION PERMIT  
FILE # 0000034870  
WBSF - BAY CITY, MICHIGAN  
DTV - CH. 23 - 600 kW - 365 m HAAT**

Prepared for: FLINT (WBSF-TV) LICENSEE, INC.

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a Licensed Professional Engineer in the Commonwealth of Virginia, No. 7418, and in New York State, No. 63418.

#### **GENERAL**

This office has been authorized by FLINT (WBSF-TV) LICENSEE, INC., licensee of WBSF, channel 46, facility ID number 82627, licensed to Bay City, Michigan, to prepare this statement, FCC Form 2100, Schedule A, its technical sections, and the associated exhibits in support of an application for a minor modification of its post-reassignment construction permit, File # 0000034870, that authorizes WBSF to use channel 23 for its post-reassignment broadcasting. The instant application proposes only to substitute a different antenna model number, a Dielectric model TFU-20JSC/VP-R 4C200, which has a slightly different horizontal azimuth pattern and an electrical beam tilt of 0.75 degrees. The applicant requests no other changes.

**STATEMENT OF JOHN E. HIDLE, P.E.  
WBSF - Bay City, Michigan  
PAGE 2**

**DIRECTIONAL ANTENNA**

The applicant proposes to install a new Dielectric model TFU-20JSC/VP-R 4C200 elliptically polarized directional transmitting antenna with its center of radiation located at a height above ground of 367 meters, and a height above average terrain of 365 meters. The antenna manufacturer's horizontal plane azimuth radiation pattern for the horizontally polarized component is shown and tabulated in exhibit 2. The manufacturer's horizontal plane azimuth pattern for the vertically polarized component is shown and tabulated in exhibit 3. The manufacturer's vertical plane elevation radiation pattern, illustrating the antenna's radiation characteristics above and below the horizontal plane is shown and tabulated in Exhibit 4.

**PREDICTED COVERAGE CONTOURS**

The predicted coverage contours were calculated in accordance with the method described in Section 73.625(b) of the Rules, utilizing the appropriate F(50,90) propagation curves (47 CFR Section 73.699, Figure 9), proposed Effective Radiated Power, and antenna height above average terrain as determined for each profile radial. The average terrain on the eight cardinal radials from 3 kilometers to 16 kilometers from the site, was determined using the NED Three Second US Terrain Database as permitted in the FCC Rules. The antenna site elevation and coordinates were determined from FCC antenna registration data. Exhibit 1 shows the predicted Noise Limited (39.66 dBu) contour, and the principal community (48 dBu) contour. The 48 dBu contour completely encompasses the principal community of license, Bay City, Michigan.

**STATEMENT OF JOHN E. HIDLE, P.E.  
WBSF - Bay City, Michigan  
PAGE 3**

**ALLOCATION CONSIDERATIONS**

***Post-Transition DTV Considerations***

A new study was performed, using the FCC's software, *tvstudy*, v. 2.2.5, to determine if the instant modification of its construction permit is predicted to cause new prohibited interference to post reassignment DTV stations, construction permits, DTV allotments or Class A DTV stations. The study results, shown in Appendix B, indicate that the modification request is predicted to cause no new interference exceeding 0.5% to the populations served by any relevant facility.

The new study also predicts substantial received interference to WBSF's service area from multiple sources, which reaches a "worst-case" predicted level of interference to 8.24% of WBSF's expansion application population. However, the applicant is willing to accept this predicted interference to WBSF.

***International DTV Considerations***

The WBSF site is located 107.7 kilometers from the nearest point on the US-Canadian border. The above study includes the relevant Canadian DTV facilities, and shows no predicted interference to any Canadian DTV facility. (See Appendix B)

**RADIO FREQUENCY IMPACT**

The FCC's guidelines and procedures for evaluating environmental effects of radio frequency (RF) emissions are generally based on recommendations by the National Council on Radiation Protection and Measurements (NCRP) in NCRP Report No. 86 (1986) and by the American National Standards Institute and the Institute of Electrical and

**STATEMENT OF JOHN E. HIDLE, P.E.**

**WBSF - Bay City, Michigan**

**PAGE 4**

Electronic Engineers, LLC (IEEE) in ANSI/IEEE C95.1-1992 (IEEE C95.1-1991). The guidelines define a maximum permissible exposure (MPE) level for occupational or "controlled" situations, and for "uncontrolled" environments that apply in all other cases that might affect the general public. The FCC Office of Engineering and Technology's technical bulletin No. 65 entitled, "Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields" (Edition 97-01, August 1997), provides assistance to determine whether FCC-regulated facilities comply with guidelines for human exposure to radio frequency electromagnetic fields as adopted by the Commission in 1996. OET Bulletin No. 65 contains the technical information necessary to evaluate compliance with the FCC's policies and guidelines. The Maximum Permitted Exposure (MPE) level for broadcast facilities that operate on a frequency between 30 MHZ and 300 MHZ is 200 microwatts per centimeter squared ( $\mu\text{W}/\text{cm}^2$ ) for an "uncontrolled" environment, and is 1000 microwatts per centimeter squared ( $\mu\text{W}/\text{cm}^2$ ) for a "controlled" environment. The MPE level for broadcast facilities that operate on a frequency between 300 MHZ and 1500 MHZ, primarily UHF DTV stations, is determined for an "uncontrolled" environment by dividing the operating frequency in MHZ by 1.5, and is determined for a "controlled" environment by dividing the operating frequency in MHZ by 0.3.

The predicted emissions of WBSF must be considered, in addition to predicted emissions from any other proposed or existing stations at the site. For WBSF, which will operate on television Channel 23 (524-530 MHZ), the MPE is 351.33 microwatts per centimeter squared ( $\mu\text{W}/\text{cm}^2$ ) in an "uncontrolled" environment and 1,756.7  $\mu\text{W}/\text{cm}^2$  in a

**STATEMENT OF JOHN E. HIDLE, P.E.  
WBSF - Bay City, Michigan  
PAGE 5**

"controlled" environment. The proposed WBSF facility will operate with a maximum ERP of 600 kW from an elliptically polarized directional transmitting antenna with a centerline height of 367meters above ground level (AGL). Considering a predicted vertical plane relative field factor of 0.300 the WBSF facility is predicted to produce a power density at two meters above ground level of  $27.084 \mu\text{W}/\text{cm}^2$ , which is 7.71% of the FCC guideline value for an "uncontrolled" environment, and 1.54% of the FCC's guideline value for "controlled" environments. There is a licensed DTV facility, pre-repack WEYI-TV, channel 30, and DTV CP facility, post-repack WEYI-TV, channel 18, that are also located at the WBSF site. Therefore, the total estimated percentage of the ANSI value at the proposed site, including the cumulative radiation from all post-transition authorizations within the relevant proximity, is 11.24% of the limit applicable to "uncontrolled" environments, and 2.25% of the limit for "controlled" environments. (See Appendix A)

**OCCUPATIONAL SAFETY**

The licensee of WBSF remains committed to the protection of station personnel and/or tower contractors working in the vicinity of the WBSF antenna, and is committed to reducing power or ceasing operation during times of maintenance of the transmission systems, when necessary, to ensure protection to personnel.

**SUMMARY**

It is submitted that the instant application seeking a modification of its expansion construction permit to substitute a different antenna model number, a Dielectric model TFU-20JSC/VP-R 4C200, which has a slightly different horizontal azimuth pattern and an

electrical beam tilt of 0.75 degrees, as described herein, complies with the Rules, Regulations and relevant Policies of the Federal Communications Commission. This statement, FCC Form 2100, its technical sections, and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.
