

TECHNICAL SUMMARY

K40NF-D (LD CP), Channel 24, Santa Barbara, California

This application is for displacement channel given that the currently authorized channel is outside of the post repack television band.

The applicant proposes operation on Channel 24 utilizing a Full Service mask filter, at an ERP of 5.00kW.

An interference analysis for the proposed facilities was conducted using the FCC's TV Study software. The results show no interference either caused or received that exceed the limits set by the FCC for protected facilities.

A copy of the TV Study results is attached as an exhibit to this application.
