

## RF Hazard and Environmental Statement

For Low Power Station K40KS-D, Channel 30, 1.0 kW, Facility ID: 182680

With respect to potential human exposure to radio frequency energy, calculations prepared in accordance with FCC Bulletin OET-65 (Edition 97-01) indicate that the proposed facilities will not result in human exposure to RF energy at ground level in excess of FCC Standards. Calculations were conducted at 2 meters above ground level with the following results:

Antenna Height:	Relative Field:	FCC Limit:	% of FCC Limit:
35 meters	0.101	0.335 mW/cm <sup>2</sup>	3.2%

Further, the site is located on private property in an area not accessible to the general public. Access is further restricted by chain-link fencing and a locked gate to prevent access by unauthorized persons.

All maintenance personnel are instructed regarding potential RF exposure and by mutual agreement between all site users and the site owner, facilities may be reduced in power or turned off to facilitate tower work in areas where exposure may exceed FCC limits.
