

WIVE-LP DIGITAL COMPANION CHANNEL APPLICATION

The herein proposed WIVE-LP Digital Companion Channel Application proposes a slight site relocation of less than 0.1 miles from the WIVE analog facility with ample contour overlap, a change in antenna pattern and an increase in ERP. As shown in the attached TVStudy, performed with a L-R cell size of 0.5 km and a L-R profile of 0.1 km, no prohibitive interference is caused to any other facility. The proposed change, filed upon the lift of the LPTV/Translator Freeze, will afford WIVE-LP a digital companion facility to allow the station to continue to provide service to the public and therefore will serve the public interest.
