

MINOR MODIFICATION APPLICATION

This application effectively amends the application granted on March 12, 2018 (the “Original Application”) to modify the Class A TV station, K20JX-D in Sacramento, CA. As set forth in the Original Application, K20JX-D needed to increase its power and move to another transmitter site in order to accommodate a complex daisy chain of station moves resulting from the repack, and to support the Unable to Construct Channel Modification Agreement between Amazing Facts, Inc. (“AFI”) and ION Media San Jose License, Inc., a copy of which was submitted with the Original Application, and which provides for the submission of the Original Application.

Since the submission of the Original Application, AFI has entered into an agreement to sell K20JX-D to HC2 Station Group, Inc. The new transmitter site approved under the Original Application is no longer available for use by HC2 Station Group, and it is a condition to closing of the acquisition that HC2 obtain a CP for a new transmitter site. This application seeks FCC approval for such new site. We request that this application be considered a substitute for the Original Application.

The new site proposed in this application provides excellent line-of-sight coverage of the community of license. From this site, K20JX-D would receive only 0.66% unique interference from KSPX-TV, and AFI agrees to accept such interference. The grant of this application would greatly serve the public interest by reducing the harmful interference to be received from KSPX-TV and improve the quality of service that K20JX-D provides to its community.
