

WSKG-TV

Request for Special Temporary Authority

June 2019

At the conclusion of testing its post-repack facilities, WSKG-TV, Binghamton, New York, experienced a power supply fault in its pre-repack transmitter's power supply. As a result, the station is operating at approximately seventy percent of licensed power. In light of the station's scheduled transition to new, post-repack facilities on or before August 2, WSKG-TV does not intend to repair the failed power supply. Thus, WSKG-TV respectfully requests temporary authority to operate with reduced power until it is able to commence broadcasting on its new channel.
