

Engineering STA

WGEI CH 27 FI 187828

The Applicant has a smaller transmitter, than is required for the construction permit, and the antenna panels on hand to build a smaller version of the station effective immediately. The applicant is planning new equipment as part of a system wide plan and prefers to implement this smaller installation in the interim.

The Applicant believes it is in the public interest to provide free-over-the-air television to the community during this repack transitioning process.

TVStudy predicts incoming interference from WFGX which the applicant acknowledges and accepts for this reduced power installation.

Existing site, no new construction.
