Construction Permit Certifications

A commission grant of this application would not be an action which would have a significant environmental effect for the following reasons:

1. The site is an established communications site and the applicant does not intend to erect another tower or place another building. The antenna and equipment will be housed on or in existing structures.
2. The transmitter power is only 50 watts and the applicant will allow further power reduction as necessary to protect authorized workers from harmful radiation levels.
3. The application is only for the purpose of changing an existing station to a lower channel in accordance with the spectrum repack.
