

**Statement re Antenna Location Data
KATW(FM) Lewiston, Idaho
December 2019**

The KATW antenna is installed on ASR 1031765. The underlying construction permit was filed in CDBS, using NAD27 coordinates rounded to the nearest second. This license application is filed in LMS, and LMS pre-filled the form with coordinates which were converted back to NAD83.

Since the tower coordinates originated in NAD83, were converted to NAD27 and rounded, and then converted back to NAD83, error has crept in such that the pre-filled coordinates do not match the coordinates on the ASR record.

Therefore, the pre-filled coordinates have been corrected in this license application, such that they match the ASR record.
