

STA Justification
prepared 12/17/2019 for
UniMas Dallas LLC
KSTR-DT Irving, TX
Channel 34 1000 kW-DA 517 m

This STA request was necessitated by the discovery of a discrepancy between the antenna radiation pattern data included in the October 2018 Application for Modification of Construction Permit form and the manufacturer's antenna data pages attached to that Application. This STA is intended to cover operation of KSTR-DT while the FCC staff considers a contemporary Application for Modification of Construction Permit to correct the erroneous antenna pattern data in the station's LMS record to match that shown on the antenna data pages.

This discrepancy arose from the antenna manufacturer's revisions of detailed antenna data while not changing the version and date labeling on its technical proposal document. During preparation of the October 2018 Modification, the radiation pattern data attached was not checked against the pre-filled data for the same antenna, imported from the station's construction permit record, because the technical proposal version number and date had not changed. This discrepancy was discovered during preparation of the station's license application.
