<sup>1</sup> The information regarding late filed items is already on file with the Commission in the online public inspection files. Requiring this information in a license renewal application contravenes the provisions of Section 307(c)(2) of the Communications Act. The applicant's actions complying with this improper inquiry should not be construed as a waiver of its objection to violation of its rights under 47 USC §307(c)(2).

<sup>2</sup> Many of the dates relied upon in this list were generated by the station's traffic system and do not necessarily correspond to the date a physical document was available to scan and upload into the public inspection file. This is especially so in the case of invoices. Invoices are usually printed at the beginning of the month after the date shown on the invoice. So an invoice dated in October 2018 would normally be printed in the first part of November 2018. The submission of this list should not be construed as the station's agreement that political file items were not placed in the public inspection file as soon as possible.

### C. Procedures Adopted to Prevent Recurrence of Problems

To remedy its public inspection file problems, station personnel have been instructed on the importance of uploading political materials to the public file immediately and will take care to note any unusual circumstances that prevent them from accomplishing this mandate.
