

Applicant hereby requests Special Temporary Authority to operate with the facilities specified in a pending application for construction permit (LMS File No. 0000094427) while that application is pending at the Commission. As detailed in that application, during completion of the station's post-auction facility, it was determined that the coordinates and ground elevation for the station's antenna structure registration required correction. The Antenna Structure Registration has now been updated based on a new FAA determination of no hazard, and the construction permit application has been filed to conform the station's license. Application is further requesting this STA in an abundance of caution while the permit application remains pending.
