Allocation

This proposal clears all stations under the spacing rules of §73.207.

Environmental Study

This is the site of the original 300 foot ASR 1029762. This structure collapsed during Hurricane Michael in 2018. It is proposed to rebuild the structure to a height of 499 feet. FAA approval has been obtained. Because the increase of height is greater than 10% of the previously approved structure, a new Environmental Study is required. That study is underway. An amendment will be filed to this application when the study is complete.
