

## Data Error on Application

The purpose of this exhibit is to point out to FCC staff that on the Draft Copy of this application a computer generated error appears to occur. There is a discrepancy on page six in the Antenna Location Data section under Antenna Data. The Height of Radiation Center Above Mean Sea Level is shown as 554 meters in both Horizontal and Vertical planes. The MLS online minor modification form displays the correct distance of 447.2 meters, for both the Horizontal and Vertical planes. Because this data is generated automatically by the software, there appears to be no way for the applicant to correct this discrepancy. The applicant requests that this discrepancy will not result in any delays or improper processing of this application.
