

## PURPOSE OF APPLICATION

This minor amendment to the underlying construction permit alters the height above ground level to a location on the tower which is available for use. The applicant also alters the operating channel from CH 257 to CH 258 for a cleaner spectrum.

There is no interference created as a result of this minor change to any facility in the allocation picture.

Additionally, the LMS system failed to recognize the association of this translator facility with the correct licensee and FRN, although the CDBS system has both correctly noted.
