

**W294CJ, CHARLESTON, SC**  
**EXHIBIT CONCERNING CP CONDITIONS**

The Commission attached four special operating conditions to the W294CJ construction permit, File No. BNPFT-20171213ABW. Mediatrix SC, Inc. accepts conditions 1 (Revitalization of the AM Service condition), 3 (cooperation with other users at the transmitter site) and 4 (filing of a covering license application). No special showings are required for these conditions.

With respect to condition 2, which deals with the side-mounting of the W294CJ antenna on the tower of co-owned AM Broadcast Station WLTQ, Charleston, South Carolina, this is to state that our project engineer did check the AM common point and base impedance measurements for WLTQ before commencing the FM Translator antenna installation, as well as after the installation was completed. He found that the installation did not change the WLTQ operating parameters. Therefore, there is no need for WLTQ to file an FCC Form 302-AM application for direct measurement.

It should be noted that WLTQ(AM) was granted a modification of its license on June 21, 2011 to non-commercial educational status, File No. BML-20110427ABQ. W294CJ will operate as a non-commercial educational FM translator station.
