Environmental Effects

Each of the above-captioned minor change applications has been held in the queue because the Environmental Effect question of Schedule 301 had been answered "Yes". This answer was made solely because the Section 106 process had not yet been completed at the time of filing.

The third-party tower owner/proponent has now completed its Section 106 coordination, with a finding of no adverse effects anticipated. The tower is now constructed, and although FCC Antenna Structure Registration was not strictly required, the tower has been registered as ASR 1313574.

This amendment is being filed to each of the above pending applications, in order to update the answer to the Environmental Effect question to "No" (i.e. "no significant environmental effect").
