

**STATEMENT OF JOHN E. HIDLE, P.E.
IN SUPPORT OF AN AMENDMENT TO AN
APPLICATION FOR LICENSE TO COVER
POST REPACK CONSTRUCTION PERMIT
FILE # 0000034394
WFGX - FORT WALTON BEACH, FLORIDA
DTV - CH. 14 - 1000 kW - 582.8 m HAAT**

Prepared for: WFGX LICENSEE, LLC

I am a Consulting Engineer, an employee in the firm of Carl T. Jones Corporation, with offices located in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission. I am a licensed Professional Engineer in the Commonwealth of Virginia, No. 7418, and in New York state, No. 63418.

GENERAL

This office has been authorized by WFGX LICENSEE, LLC, licensee of WFGX, channel 14, facility ID #6554, licensed to Fort Walton Beach, Florida, to prepare this statement, FCC Form 2100, Schedule B, and associated exhibits in support of an amendment to an application for license to cover its constructed facility according to the terms of its post-reassignment construction permit, File # 0000034394.

The instant application, in addition to a facility "proof-of-performance", also provides certain documentation that is necessary to demonstrate that no objectionable interference will be caused to existing land mobile radio facilities that are located in the 460 MHz to 470 MHz band, which is directly adjacent to UHF television channel 14 (470 - 476 MHz).

Notification was made to 502 identified land mobile facilities, as shown in the attach example exhibit. Should there subsequently arise any interference complaints the applicant will respond accordingly and immediately notify FCC staff.

STATEMENT OF JOHN E. HIDLE, P.E.
WFGX - Fort Walton Beach, Florida
PAGE 2

DISCUSSION

The applicant, in order to comply with the FCC's channel 14 special operating conditions set forth in its construction permit, file # 0000034394, in constructing the facility has installed an RF filter with highly suppressive characteristics in the adjacent frequency band below channel 14. The manufacturer's measured data, which is included herein, show the sufficiently suppressive "out-of-band" characteristics of the filter.

SUMMARY

It is submitted that the instant amendment to its application for license to cover its post-reassignment channel 14 construction permit, file # 0000034394, which includes data intended to demonstrate compliance with the channel 14 special conditions, as described herein, does comply with the Rules, Regulations and relevant Policies of the Federal Communications Commission. This statement and the attached exhibits were prepared by me or under my direct supervision and are believed to be true and correct to the best of my knowledge and belief.

3.7 Thermal Images

3.7.1 Various Thermal Images

3.8 FCC Limits

3.8.1 Out of Channel Requirements

Full Service transmitters should meet the following Out-of-Channel Emissions requirements [FCC 47CFR§73.622(h)]:

- a) In the range between $\frac{1}{2}$ the width of the Resolution Bandwidth filter used and 500 kHz from the Channel Edge:

$$\text{Emissions} \leq -47 \text{ dB}_{\text{DTV}} \text{ (4)}$$

- b) More than 6 MHz from the Channel Edge:

$$\text{Emissions} \leq -110 \text{ dB}_{\text{DTV}} \text{ (5)}$$

- c) At any frequency between 500 kHz and 6 MHz from the Channel Edge:

$$\text{Emissions} \leq -(11.5(|\Delta F|-0.5)+47) \text{ dB}_{\text{DTV}} \text{ (6)}$$

Where:

ΔF is the frequency difference, in MHz, from the Channel Edge

3.8.2 Notes for all Masks

Note 1: Measurements need not be made any closer to the Channel Edge than one half of the width of the Resolution Bandwidth filter used in the measurement instrument.

Note 2: While Figure 3, Figure 4, and Figure 5 depict only the band of frequencies near the transmitter's output signal, the FCC's ultimate attenuation requirement specifically applies to all Emissions greater than 6.0 MHz away from the transmitter's Channel Edges, including harmonics, sub-harmonics or other spurious signals.

Note 3: The FCC accepts measurements made using one of two methods [FCC Public Notice DA-05-1321A1, May 10, 2005, "OET Clarifies Emission Mask Measurement for DTV Transmitters"]:

Method 1: Measure the Emissions in a narrow Resolution Bandwidth (30 kHz, 10 kHz or narrower). Either scale the measured power to a 500 kHz bandwidth based on IEEE P1631™/D3, February, 2008 $10 \log(500 \text{ kHz}/\text{noise bandwidth of the resolution filter})$ or scale the measured attenuation (i.e., $10 \log(\text{measured power}/\text{total signal power})$) based on $10 \log(\text{noise bandwidth of the resolution filter}/500 \text{ kHz})$. These values are then compared point by point to the emission mask.

Method 2: Sum the power across a 500 kHz window in order to implement an effective measurement bandwidth of 500 kHz; this power is then compared to the emission mask value computed for the center frequency of the 500 kHz Sub-Band. This method may be performed either by manually summing the measurements or by using a measurement instrument's Band Power Measurement function. It is sufficient to measure a contiguous sequence of twelve 500 kHz windows across each adjacent Channel, plotting the measured value at the center of the 500 kHz Sub-Band window.

The FCC allows a single method to be used for all measurements, or, if desired, one of the above methods may be employed in the 500 kHz window adjacent to each Channel Edge and the other method for all other measurements further from the Channel Edge. The FCC requires that the frequency bin

spacing on the measurement test instrument is to be less than or equal to the Resolution Bandwidth as displayed.

Note 4: Mask measurements performed in accordance with IEEE-1631-2008 section 4.6.2 using method 4.6.5 (described above). To overcome the limitations of direct measurement with the test equipment, the spectral response was measured prior to the mask filter with a RBW of 10 kHz, span of 30 MHz and utilizing 6001 points. The mask filter was directly swept using a 30 MHz span and utilizing 6001 points. The data from both sweeps are imported into a spreadsheet, corrected for RBW and coupler frequency response on a point by point basis. The result is then plotted against the FCC mask requirements for verification of mask compliance.

3.8.3 Transmitter Emission Limit Diagram

3.8.4 Notes for Harmonic Measurement

Note 1: A coupler was characterized at the fundamental, two times the fundamental and three times the fundamental. A reference value is then measured for the fundamental using a spectrum analyzer. A characterized high pass filter is then inserted between the spectrum analyzer and the coupler to avoid overloading the spectrum analyzer. Measurements are taken at two and three times the fundamental and a spreadsheet is used to derive the resultant level output at these bands.

3.8.5 Notes for Pilot Frequency Measurement

Note 1: Measurement values of less than 100 HZ RBW and VBW shall be used.

Note 2: When available, the test equipment shall be locked to a GPS provided 10MHz reference. The minimum acceptable method is to have the device under test and the transmitter locked to a shared 10MHz reference.

Re: WFGX Land Mobile contact discovery project.

Dear Dale,

Attached to this e-mail is:

- 1) The final spreadsheet for you to share with whomever is charged with solving any Land Mobile interference that may arise when you start testing. (This spreadsheet is sorted in 4 different tabs, please read the "Read Me" tab first).
- 2) The certificate of mailing of the Land Mobile Letters.
- 3) This letter.

The goal of this exercise was two-fold:

- 1) Find the best, most knowledgeable, contact for each of the licenses between 465-470MHz within 100Km of the transmitter.
- 2) To show evidence of your sincere attempt and good faith effort to identify and work with Land Mobile licensees in the area.

As a quick summary, 503 letters were mailed to cover the 325 unique call signs within 100km of the transmitter, between the frequencies of 465-470 MHz. (note: one of the letters was a control letter we send to ourselves).

This mailing resulted in creating 95 good contacts covering 118 of the 325 unique call signs (some call signs cover multiple frequencies).

Please let me know if you have any questions.

As always, we truly appreciate your business!
