Technical Exhibit- Amended application

On 05/31/2018 Ventana Television filed an application (0000054774) for displacement during the special filing window for LPTV stations and translators. W40CU will eventually be displaced due to being on a channel above 36.

Ventana recently determined that the application as filed would cause prohibited interference to WXCW CP as the vertical pattern for the W40CU proposal was not properly loaded into the application. This amendment corrects that error and causes the application to match the supplied TV Study report which demonstrates that the proposal causes no prohibited interference.

The previous references to not beginning operations until WTTA-TV ceased operations on channel 32 are now moot. WTTA-TV ceased operations on 06/25/2018, thus the requested waiver of the contingent application rule is no longer applicable.
