

### Public File Documents

All required documents for the past license term are currently posted in the station's online public inspection file.

The EEO Public File report for due to be posted by June 3, 2019, however, was uploaded 23 days after the deadline due to an oversight. Additionally, although the EEO Public File Reports due in the years 2013 through 2016 were timely placed in the station's paper public inspection file, they were not uploaded to the online public file until May 17, 2020. The delay in uploading was due to a misunderstanding of the requirements and the mistaken belief that at the time of the deadline for initiating the online public file, only the most recent EEO public file report needed to be uploaded.

Further, with regard to the issues/programs lists, it should be noted that for the quarters prior to the first quarter of 2018, those documents were timely posted to the online public file, but all four of the issues/programs lists for a particular year were scanned together as annual documents. Beginning with the first quarter of 2018, however, each quarterly report was added separately to the public file following the end of the relevant quarter.
