

Licensee has been operating on its post-auction channel 21 facilities since May 7, 2020. Due to complications related to licensing channel sharing facilities in LMS, Licensee needed to refile its application for a minor modification on May 8, 2020, and FCC staff had to correct the application to specify the proper channel before granting the construction permit. Once the construction permit was granted, Licensee inadvertently failed to file the license to cover. To the extent necessary, Licensee seeks a waiver of the requirement in Section 73.1620 to file a license application within 10 days of commencing program testing.
