Minor Change

Applicant had filed a displacement application during the 2018 Displacement Window. The engineer at the time, moved the site closer to Huntsville, AL. The Applicant has been unable to negotiate reasonable lease terms with the proposed tower owner. The Applicant believes it is in the public interest to remain at the existing site and build the Ch 32 displacement and get it on the air as soon as possible.

The tower is located on private land, held by the Applicant's principal. Minor modifications to the building are required to accommodate the larger transmitter. No other construction is required. There are no other environmental impacts.

TVStudy predicts a small amount of incoming interference (3.52%) from several sources. The Applicant accepts these results.

Respectfully submitted,
Susan Hansen
