

KTVR-FM, La Grande, OR.
Facility ID NO. 94194
Minor Modification of a Licensed Facility

Supplemental Engineering Exhibit

LMS would not permit inclusion of the following Transmitting Antenna Data:

Manufacturer:	SWR
Model:	FMFB/2-102WS
Antenna Number of Sections:	2
Antenna Spacing Between Sections:	2.59

This construction permit application proposes to replace the antenna specified in KTVR-FM's current license (File No. BLED-20040504ABP) with a new antenna that is elliptically polarized. As Oregon Public Broadcasting ("OPB") was preparing for the project to replace KTVR-FM's antenna, it was brought to OPB's attention by the manufacturer of the proposed new antenna that the current antenna, which has been in use since it was licensed in 2004, may not, in fact, be circularly polarized as specified in KTVR-FM's 2004 license. OPB has not been able to verify this but, out of an abundance of caution, OPB is bringing it to the Commission's attention and hereby asks the staff to contact OPB if any additional steps related to continued use of KTVR-FM's currently licensed antenna are warranted.
