

ENGINEERING EXHIBIT

Digital Class A Television Station Application for Minor Modification of Licensed Facility

prepared for

Delta Media Corporation

KDCG-CD Opelousas, LA

Facility ID 349

Ch. 22 15 kW Directional

Delta Media Corporation (“Delta”) is the licensee of Class A television station KDCG-CD, Channel 22, Facility ID 349, Opelousas LA. KDCG-CD is licensed to operate (file# BLDTA-20140813AAQ) with 15 kW effective radiated power (“ERP”) and uses a directional antenna. *Delta* herein seeks a minor modification Construction Permit to utilize a different directional antenna, increase antenna height by 1.5 meters, and change to elliptical polarization. No change in the site location is proposed.

The proposed KDCG-CD facility will employ a replacement antenna system to be side-mounted on the tower structure associated with FCC Antenna Structure Registration number 1251823. No change to the overall structure height will result.

The proposed antenna is an elliptically polarized directional Dielectric model TLP-16B/VP having elliptical polarization (17 percent vertical power). The ERP is 15 kW using a “stringent” out of channel emission mask. The maximum horizontally polarized ERP is 15 kW and the maximum vertically polarized ERP is 2.55 kW. The vertically polarized component will not exceed the horizontally polarized component at any azimuth. A plot of the directional antenna’s azimuthal pattern is supplied in Figure 1.

Figure 2 depicts the 51 dB μ coverage contours of the proposed and licensed¹ facilities. The use of the same site and corresponding service area overlap demonstrate compliance with §73.3572 for a minor change.

¹As noted on Figure 2, the FCC LMS license record for the existing KDCG-CD indicates nondirectional

Interference study per OET Bulletin 69² shows that the proposal complies with the FCC's interference protection requirements toward all digital television, television translator, LPTV, and Class A stations. The results, summarized in Table 1, show that any new interference does not exceed the FCC's interference limits (0.5 percent to full power and Class A stations, and 2.0 percent to secondary stations) to any facility.

Human Exposure to Radiofrequency Electromagnetic Field (Environmental)

The proposed operation was evaluated for human exposure to RF energy using the procedures outlined in the FCC's OET Bulletin Number 65. Based on OET-65 equation (10), and considering 20 percent antenna relative field in downward elevations (pattern data shows less than 20 percent relative field at angles 10 to 90 degrees below the antenna), the calculated signal density near the tower at two meters above ground level attributable to the proposed facility is $0.3 \mu\text{W}/\text{cm}^2$, which is 0.1 percent of the general population/uncontrolled maximum permitted exposure limit. This is below the five percent threshold limit described in §1.1307(b) regarding sites with multiple emitters, categorically excluding the applicant from responsibility for taking any corrective action in the areas where the proposal's contribution is less than five percent.

The general public will not be exposed to RF levels attributable to the proposal in excess of the FCC's guidelines. RF exposure warning signs will continue to be posted. With respect to worker safety, the applicant will coordinate exposure procedures with all pertinent stations and will reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from RF electromagnetic field exposure in excess of FCC guidelines. This

operation. However, the underlying Construction Permit (BPDTA-20110824ABC) and its application specified a directional antenna, and a substitute directional antenna was specified in the subsequent license application (BLDTA-20140813AAQ). It would appear that the as-built antenna information did not get completely updated in the database license record. The antenna pattern proposed herein closely matches that which was authorized in BPDTA-20110824ABC for KDCG-CD, resulting in a $51 \text{ dB}\mu$ contour that is nearly the same as the existing, actual KDCG-CD facility.

²FCC Office of Engineering and Technology Bulletin number 69, *Longley-Rice Methodology for Evaluating TV Coverage and Interference*, February 6, 2004 ("OET-69"). This analysis employed the FCC's current "TVStudy" software with the default application processing template settings, 1 km cell size, and 1 km terrain increment. Comparisons of various results of this computer program (run on a Mac processor) to the FCC's implementation of TVStudy show excellent correlation.

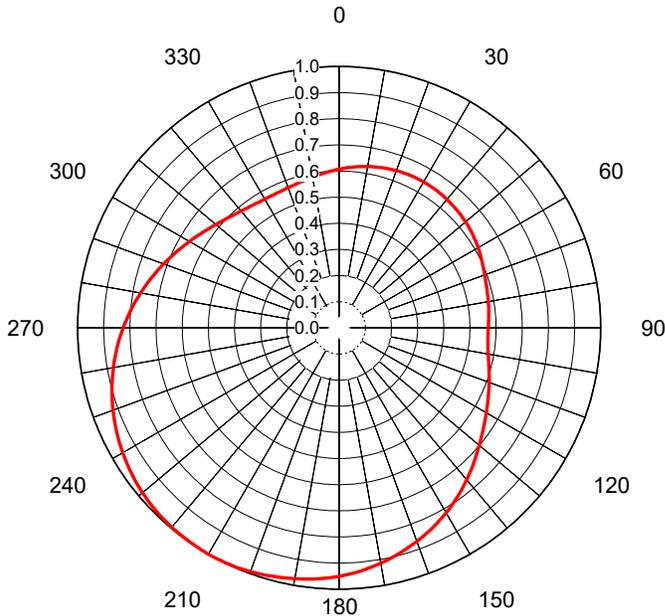

exhibit is limited to the evaluation of exposure to RF electromagnetic field. No increase in structure height is proposed.

Channel and Facility Information

Section	Question	Response
Proposed Community of License	Facility ID	349
	State	Louisiana
	City	OPELOUSAS
	DCA Channel	22
	Designated Market Area	Lafayette LA

Antenna Location Data

Section	Question	Response
Antenna Structure Registration	Do you have an FCC Antenna Structure Registration (ASR) Number?	Yes
	ASR Number	1251823
Coordinates (NAD83)	Latitude	30° 20' 33.0" N+
	Longitude	091° 57' 46.6" W-
	Structure Type	TOWER-A free standing or guyed struct
	Overall Structure Height	312.7 meters
	Support Structure Height	294.5 meters
	Ground Elevation (AMSL)	7.0 meters
Antenna Data	Height of Radiation Center Above Ground Level	278.9 meters
	Height of Radiation Center Above Mean Sea Level	285.9 meters
	Effective Radiated Power	15 kW

**Antenna
Technical Data**

Section	Question	Response
Antenna Type	Antenna Type	Directional Custom
	Do you have an Antenna ID?	No
	Antenna ID	
Antenna Manufacturer and Model	Manufacturer:	Dielectric
	Model	TLP-16B/VP
	Rotation	210 degrees
	Electrical Beam Tilt	1.0
	Mechanical Beam Tilt	Not Applicable
	toward azimuth	
	Polarization	Elliptical
Elevation Radiation Pattern	Does the proposed antenna propose elevation radiation patterns that vary with azimuth for reasons other than the use of mechanical beam tilt?	No
	Uploaded file for elevation antenna (or radiation) pattern data	
	Out-of-Channel Emission Mask:	Stringent

Directional Antenna Relative Field Values (Pre-rotated Pattern)

Degree	Value	Degree	Value	Degree	Value	Degree	Value
0	1.000	90	0.661	180	0.645	270	0.650
