

ENVIRONMENTAL STATEMENT
Renard Communications Corp.
March, 2021

From an environmental perspective, the proposed construction would involve adding an additional antenna on the existing tower with no change to the height of the structure and would have no impact on the environment.

The power of other facilities on the tower will be reduced or operation ceased as necessary per OET recommendations while tower workers are in the vicinity of the various antennas.

As the existing and proposed antenna are on the non-directional tower of WMBO(AM), Auburn, NY, impedance measurements will be performed as required in Section 1.30003(a) of the Commission's rules.
