Declaration

I declare, under penalty of perjury, that I am a technical consultant to broadcasting and other communications systems, that I have over twenty-five years of experience in the engineering of broadcast and other communications systems, that I am familiar with the Federal Communications Commission's Rules found in the Code of Federal Regulations Title 47, that I am a Professional Engineer registered in North Carolina, that I have prepared or supervised the preparation of the attached Technical Compliance Exhibit, for Western North Carolina Public Radio, Inc., and that all of the facts therein, except for facts of which the Federal Communications Commission may take official notice, are true to the best of my knowledge and belief.

Narrative

This Exhibit provides details of the allocations for the proposed modified facilities of WZQS, Cullowhee, North Carolina. The license file number is BLED-20040819AAB. This proposal complies fully with the requirements of 47 C.F.R. §73.509.

The changes are a new site, reduced elevation, an increase in power, and a new directional pattern.

Allocations

This application proposes service to Cullowhee, North Carolina, on channel 213 as a Class A facility. The Allocations Table in this exhibit provides a list of the stations, construction permits, allocations, and applications studied. All currently licensed facilities are protected from interference from the proposed facilities under 47 C.F.R. §73.509 by this application.

An Allocations Study is included as Figure 1. Where there are facilities whose overlap is less than 3.2 kilometers (2 miles) additional figures are provided, along with the output tables from the computer program FMOVER. Those facilities are identified below.

Figure/Table	Call Sign	Community	Channel and Relationship
2	WGSN	Newport, Tennessee	214C2, first adjacent
3	WSMC-FM	Collegedale, Tennessee	214C, first adjacent

Source of Data

Transmitter location, effective radiated power, directional antenna pattern, and elevation data are extracted from the Commission's LMS. All contours for existing and proposed facilities are calculated using height above average terrain calculated at one degree horizontal increments. All contours for existing and proposed facilities are calculated using height above average terrain calculated at one degree horizontal increments. The contours were evaluated using terrain extracted from the GLOBE 30 arcsecond terrain database, formatted by V-Soft Communications to work with its allocation and mapping programs.

Population data is from 2010 U.S. Census PL data files. Population is counted by considering the location of the centroid of each census block. The data for each block is counted if it falls within the area being counted.

Area and Population

The area within the proposed 60 dBu F(50,50) service contour is calculated by a computer program which sums the areas within the contours based on 360 radials. The area is shown on a Figure at the end of this Exhibit. The population is calculated by the centroid method and is also listed on the Figure.
