Second-Adjacent Waiver Request
Augusta, GA**

The proposed LPFM station will broadcast on channel 247, which is within the 40 kilometers, second-adjacent minimum distance separation of station WTHB-FM on channel 245. The WTHB-FM interfering contour at the LPFM tower site is 61.4 dB μ F(50,50). Using the ratio of 100:1 (LPFM to WTHB-FM) on the second-adjacent channel, the population within the proposed LPFM 101.4 dB μ contours respectively is zero. Applying the antenna manufacturer's vertical radiation pattern the area of interference can be more accurately calculated geometrically, rather than just by using the free space equation alone. This particular antenna is a three bay full wave spaced Nicom BKG77-3 antenna. It was determined from the manufacturer's vertical plan that from 55 - 75 degrees below horizontal the interference area would reach the ground and extend 31.5 meters horizontally. We have proposed the antenna radiation center will be 43 meters above ground with an Effective Radiated Power of 20 watts. There are no occupied structures or roadways within the interference area of the station. Therefore, the application is in compliance with §73.807(e)(1) *Waiver of the second-adjacent channel separations.*
