**WLEW (FM) Allentown, PA - Facility ID: 39875**  
**Minor Modification of Licensed Facility BLH-19921218KD**

**47 C.F.R. Section 1.1306**

A Commission grant of Authorization for this location would not be an action which may have a significant environmental effect. The FCC FM Model software predicts the proposed facility will create a maximum power density near the ground of  $10.165 \mu\text{W}/\text{cm}^2$ . This is 5% of the maximum power density for uncontrolled public access areas in accordance with OET Bulletin 65. The permittee/licensee in coordination with other users of the site will reduce power or cease operation as necessary to protect persons having access to the site, tower or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.

**47 C.F.R. Sections 73.207, 73.213, and 73.1125**

The need for this modification is the result of tower reconfiguration among multiple tenants to accommodate the ongoing television band repack. A slight coordinate update is required to match the antenna structure registration information for the tower. The proposed 54 and 60 dBu contours lie wholly within the presently licensed contours as shown on the attached coverage map of the proposal. Therefore no decrease in present separations to protected authorizations is being proposed. As a result the proposal is compliant with 47 C.F.R. 73.207 and 73.213. A local toll free phone number is provided in the city of license satisfying 47 C.F.R. 73.1125.

  
Carl E. Gluck, CPBE
