

### **PURPOSE STATEMENT**

The sole purpose of this license modification application is to reflect a change in transmission line.

Section 73.1690(c)(10) of the Commission's rules provides that "[r]eplacement of a transmission line with one of a different type or length which changes the transmitter operating power (TPO) from the authorized value, but not the [effective radiated power (ERP)], must be reported in a license modification application to the Commission."

This application is being submitted to change the transmitter power output (TPO) to 0.923 kW, due to a change from an Andrew 1 5/8" transmission line, which was damaged, to a Commscope model HJ5-50 7/8" transmission line. The ERP has not changed.
