Applicant had filed an Engineering STA to operate at a reduced power, File # 0000112819. Applicant has been operating pursuant to this Engineering STA since 5/15/2020 but failed to file the necessary extensions until this time. Applicant believes it is in the public interest to continue this reduced power operation and is filing for a new reduced power Engineering STA to correct the paperwork.

Applicant intends to incorporate this station into its overall DTS and ATSC 3.0 plan pursuant to the underlying license parameters at a later date.

Respectfully submitted,
Susan Hansen

The Applicant has a smaller transmitter, than is required for the CP, and the antenna panels on hand to build a smaller version of the station effective immediately.

TVStudy predicts a small amount of incoming interference which is acceptable for this STA application.

They have a number of stations involved in the Repack/Reimbursement process and they are in the planning stages of preparing all equipment orders and related installation requirements and developing a schedule of permanent installations that meet specified CP requirements. They believe it is in the public interest to continue provide free-over-the-air television to the community during this repack transitioning process.
