

K09AAD-D has ceased analog operations (LMS File No. 000015322) and has now commenced digital operation from the facilities specified in its digital companion channel construction permit (LMS File No. 0000150013, as extended by File No. 0000152228). However, the station is currently operating at approximately 20% power because of an antenna or transmission line problem.

The licensee hopes to fix the problem and be fully operational within the next 30-45 days.
