

KZDX(FM)
Burley, ID

Proposed Contingent Minor Modification
Of Licensed Facility

Channel & Facility Information:

State:	ID
City:	Burley
Channel:	260
Frequency:	99.9
Facility Type:	Commercial
Class:	C

Antenna Location Data:

ASRN:	N/A
Antenna Coordinates:	N42-20-05.6, W113-36-18 (NAD 83)
Structure Type:	TOWER
Tower Height AGL:	60.6 m
Tower Base AMSL:	2452 m
COR AGL:	42 m
COR AMSL:	2494 m
COR HAAT:	747 m
ERP:	27 kW
Allotment Ref. Coordinates:	N42-20-05.6, W113-36-18 (NAD 83)

Antenna Technical Data:

Directional Antenna:	No
Manufacturer:	ERI
Model:	SHPX-5
Antenna Number of Sections:	5
Antenna Spacing Between Sections:	1

Application Overview:

KZDX(FM) (FCC Facility ID# 42885) proposes to contingently modify its Licensed Facility using the parameters listed above. In a contemporaneously filed contingent application, KXCD(FM) Fairfield, ID (FCC ID #164259) proposes the substitution of Channel 228C for Channel 260C at Fairfield, ID, for its use.

Presently, KZDX(FM) operates on Channel 260C with facilities originally authorized in BLH-20040817AAG (the same as the channel being proposed). However, in MB Docket 05-243, Channel 228C was substituted for Channel 260C at Burley, ID, for KZDX(FM)'s use so that numerous other changes could be implemented in that rulemaking. The KZDX(FM) change to Channel 228C, however, was never implemented and the station has operated for more than a decade under a so-called "implied STA."¹

In order to clean up the FM spectrum in southern Idaho, KZDX proposes to, in effect, return to Channel 260C where it currently operates. In order for KZDX(FM) to return to Channel 260C, it must exchange channels with nearby station KXCD(FM) Fairfield, ID which is permitted to operate on Channel 260C.

Often, such changes can be accomplished through a simple contingently proposed channel substitution. However, a channel substitution of Channel 228C for Channel 260C at KXCD(FM)'s permitted site at Fairfield, ID, would represent a non-adjacent community change for KXCD(FM) since Channel 228C at Fairfield is not mutually exclusive with its current operations on Channel 260A at Salmon, ID. This creates a unique situation.

One solution to overcome this obstacle would be for KZDX(FM) to propose the substitution of Channel 260C for Channel 228C at Burley and in so doing request that the

¹In MB Docket 05-243, Millcreek Broadcasting, LLC, ("Millcreek") filed a counterproposal to effectively move or upgrade several stations in the Salt Lake City area. To accomplish various spectrum changes, Millcreek agreed to reimburse the licensee of KZDX(FM) for the expenses it would incur while implementing the channel change from 260C to 228C. Unfortunately, in 2007, just before MB Docket 05-243 became final, Millcreek filed for bankruptcy. During the proceeding, the bankruptcy court purged Millcreek's agreement to reimburse KZDX(FM) for its channel change. With the simultaneous onset of the Great Recession of 2008 and without reimbursement from Millcreek, KZDX(FM) simply did not have the financial resources to incur the technical and marketing expenses related to such a change. Therefore, the station continued operating on Channel 260C.

Commission issue an order to show-cause to KXCD(FM) to involuntarily substitute fully-spaced Channel 228C at Fairfield as that channel would become available once KZDX(FM)'s channel is reverted to 260C. However, this process would require additional Commission resources to issue such show-cause orders. A simpler method, and since KXCD(FM) does not object to the channel change, would be for the Commission to authorize the contingent channel substitutions as part of an incompatible channel swap.

The Commission has acknowledged that it will consider analogous proposals involving channel substitutions at other communities which would be necessary to create a mutually exclusive relationship required under Section 1.420(g)(3) and has determined to consider these "incompatible channel swaps" on a case-by-case basis. See Modification of FM Broadcast Licenses to Higher Class Co-Channel or Adjacent Channels, 60 RR 2d 114 (1986).²

Here, the contingent proposals qualify as an incompatible channel swap. First, both channel substitutions are mutually exclusive with the other. Exhibit 1A includes a channel spacings study for Channel 260C at KZDX(FM)'s current antenna site. It shows that KZDX(FM)'s proposal to operate on Channel 260C is mutually exclusive with KXCD(FM)'s construction permit on Channel 260C at Fairfield as the two Class C facilities on co-channels would, otherwise, be short-spaced by 175 kilometers. As shown in the channel spacings study in Exhibit 1B, and by the same distance, KXDC(FM)'s proposal to operate on Channel 228C from

²An "incompatible channel swap" is a channel substitution for an upgrade and an accommodating substitution that are mutually exclusive and are uniquely available, i.e., there is no alternate channel of its class that is fully spaced from the station's site.

its permitted site is mutually exclusive with KZDX(FM)'s allotment ordered in MB 05-243 to operate on Channel 228C at Burley.

Second, in order to qualify as an incompatible channel swap, no alternate equivalent class channels can be available for either station. As shown in the Class C Channel Preclusion Study in Exhibit 1C, no other Class C channel (other than Channel 260C) is available at KZDX(FM)'s authorized antenna site. Similarly, as shown in the Class C Channel Preclusion Study in Exhibit 1D, no other Class C channels (other than Channel 228C) is available at KXCD(FM)'s permitted antenna site.

For the reasons stated above, the applicant respectfully requests that the Commission authorize the instantly proposed incompatible channel swap and simply modify the channel authorized for KZDX(FM) "back" to Channel 260C and reinstate its licensed parameters.

Allotment Modification Statement:

Exhibit 1E is an allotment reference site channel spacings study for KZDX(FM) on Channel 260C at Burley, ID, demonstrating that the an allotment site exists where the channel would be fully spaced pursuant to Section 73.207 towards all other authorizations, allotments, and proposals (with the exception of the present KXCD(FM) permit) on Channel 260C.

In accordance with the city grade coverage requirements of Section 73.315, Exhibit 2 demonstrates that the proposed allotment site provides requisite coverage of KZDX(FM)'s community of license – Burley, ID. As can be seen in the Exhibit, 100% of Burley's community boundaries are encompassed by the theoretical 70 dBu, contour. Also, no terrain obstructions are located between the antenna site and the community.

In accordance with Note 1 to Section 73.3573, the allotment reference site, since it is co-located on an existing tower at the proposed antenna site, is located at a suitable location and is

not offshore, in a national or state park, on an airport or otherwise in an area which would necessarily present a hazard to air navigation.

Antenna Site City-Grade Coverage Statement:

Exhibit 4 demonstrates that the proposed facility's antenna site provides city grade coverage of KZDX(FM)'s community of license – Burley, ID. As can be seen in the Exhibit, 100% of Burley's community boundaries are encompassed by the F(50,50) 70 dBu contour of the proposed facility. Also, no major terrain obstructions are located between the antenna site and the community.

Downward Radiation Statement (No Actual Technical Change Proposed)

Due to the fact that the instant application proposes the EXACT technical parameters that KZDX(FM) currently operates with, there will be no change in RFR levels already authorized and measured at the site.

The site will continue to comply with the Uncontrolled Site Standards, access to the transmitting site will be restricted and appropriately marked with warning signs. When it becomes necessary for workers to ascend the tower, appropriate measures, such as reduction or shut down of power if necessary, shall be taken to ensure that the human exposure to radiofrequency radiation will not exceed the FCC guidelines.

Tower Statement:

The proposed facility is exempt from environmental processing because the facility is not located at a location specified in Section 1.1307(a)(1)-(8) of the Commission's Rules and since the tower in question already exists.
