

TECHNICAL SUMMARY
REQUEST FOR SPECIAL TEMPORARY AUTHORITY (STA)
TV STATION WXCW
NAPLES, FLORIDA
CHANNEL 32 85 KW (MAX-DA) 388 m

1. The instant request is for Special Temporary Authority (STA) for WXCW, Naples, Florida, which is currently authorized for post-transition DTV operation on channel 32 (CP, LMS File No. 0000034571). The WXCW STA facility will operate on post-transition channel 32 from a different site than the WXCW CP facility. Specifically, a Dielectric model TFU-24WB horizontally polarized directional antenna will be side-mounted at a height of 387 meters above ground level on an existing tower with a main lobe orientation of 240 degrees true. There will be no change in the overall structure height of the existing tower (ASRN 1213076).

2. The proposed STA antenna system has been designed such that there will be no extension of the predicted noise-limited service contour of the STA facility beyond that of the main facility (see Figure 1 attached).

3. RFR Compliance: The proposed facilities were evaluated in terms of potential radiofrequency radiation (RFR) exposure at ground level to workers and the general public. The radiation center for the proposed DTV antenna will be located 387 meters above ground level. The total DTV ERP is 85 kW (horizontal polarization). A conservative vertical plane relative field value of 0.1 is presumed for the antenna's downward radiation (for angles below 60 degrees downward, see attached antenna data). The calculated power density at a point 2 meters above ground level is 0.192 $\mu\text{W}/\text{cm}^2$ which is 0.05% of the FCC's recommended limit of 387.3 $\mu\text{W}/\text{cm}^2$ for channel 32 for an uncontrolled environment. Therefore, based on the responsibility threshold of 5%, the proposal will comply with the RF emission rules.

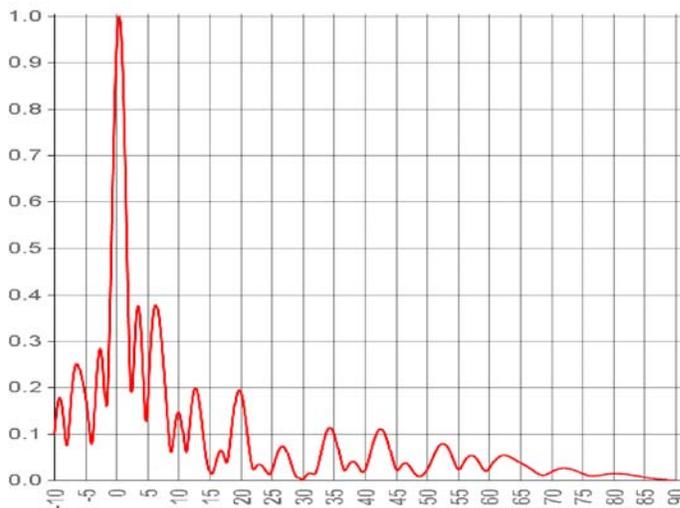

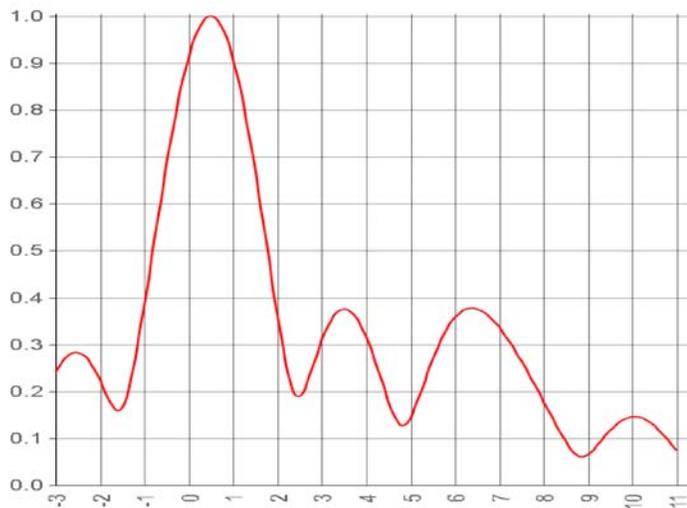

Access to the transmitting site is restricted and appropriately marked with RFR warning signs. Furthermore, as this is a multi-user site, a formal RFR protection protocol is in effect in the event that workers or other authorized personnel enter the restricted area or climb the tower to ensure that appropriate measure will be taken to assure worker safety with respect to RFR exposure. Such measures include limiting the exposure time, wearing protective clothing, reducing power to an acceptable level or termination of transmitter output power all together until workers leave the restricted area.
