

### **Diversity Showing for GPB Kingsland Application**

While the 60 dbu contour of the proposed GPB Kingsland station overlaps the existing 60 dbu contour of GPB's existing Station WWIO-FM in Brunswick, the pertinent FCC rule, Section 73.7003(b)(2) clearly states that the applicable contour for local diversity points is the 3.16 mV/m contour (i.e., the 70 dbu contour).

The 70 dbu contour of GPB's proposed Kingsland station does NOT overlap with the existing 70 dbu contour of GPB's existing Station WWIO-FM in Brunswick, and on the basis of the language in the actual (unamended) FCC rule, GPB is claiming diversity points.
