

### **Introduction and Description of Proposal**

This engineering exhibit was prepared in support of a new FM fill-in translator station application being filed by Seehafer Broadcasting Corp. at Wisconsin Rapids, Wisconsin. This is the "long form" for BNPFT-20180125AHK, FCC Facility ID 202720.

### **Filing Window Eligibility**

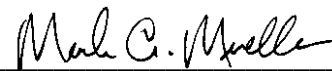

The primary station, WFHR, Wisconsin Rapids, Wisconsin, (FCC Facility ID 73053) is a class-B AM station. The proposed transmitter site is an existing tower which will have the antenna side-mounted at the 125 meter level. The proposed 60 dBu contour is contained completely within the 2 mV/m WFHR daytime contour as shown on Exhibit 10.

### **Environmental Statement**

The proposed facility requires no construction other than the attachment of the antenna and associated transmission line to the tower. The worst-case power density at 3 meters above ground is  $0.0014 \text{ mW/cm}^2$ , far below the uncontrolled space limit of  $0.2 \text{ mW/cm}^2$ . The station will cease operation when personnel must be near the antenna for longer than allowed. The tower is secured behind a locked gate with warning signs posted.

This engineering exhibit was prepared by me and is true and correct to the best of my knowledge and belief.
