

Notification of Temporary Reduced Facility Operations

It has become technically impossible to operate WUNE-TV, Linville, North Carolina (FAC. ID No. 69114) with its licensed main facility (see LMS File No. [0000111606](#)). On the afternoon of December 23, 2021 the transmitter RF output switching system that feeds the main antenna system failed. Later that day on air operations were restored with the licensed auxiliary facility (see LMS File No. [0000081298](#)).

The resolution of the problem has been delayed due to availability of the necessary components to correct the problem that are a result of the manufacturer's planned holiday closure. While the station is operating with its authorized licensed auxiliary facility at its fully authorized power, the goal is to resume full power operations with WUNE-TV's licensed main facility as quickly as possible.

The licensee will notify the Commission once full authorized operations have been restored.
