

Environmental Statement

K06PU-D

1/3/2022

The applicant proposes to operate an ERP of 300 watts horizontally polarized on channel 6 at a height of 18 meters AGL. This proposal is well with both the controlled and uncontrolled radiation hazard limits. Furthermore, the antenna proposed is a log periodic antenna that naturally has very little downward radiation. Nevertheless, placards warning of radiation hazard will be posted in an around the site at all times, and station personnel will be trained how to turn off the transmitter if ever anyone is working on the tower.
