

Engineering Statement

We have found a major error in the analog license. The major change the license is based on, BMPTTL-19890310T7, show the coordinates at 36-17-06.8, 118-50-22.3, a total tower height of 30 meters, the center of radiation at 12 meters above ground and center of radiation at 1750 meters above sea level. Thus, the ground elevation can be interpolated to be $1750 - 12 = 1,738$ meters.

The analog license to cover, BLTT-19891122JU show the center of radiation above sea level to 750 meters, not 1,750 meters. This difference is huge when plotting the analog contour.
