**ENGINEERING STATEMENT**  
**W268DI**

This statement is reference to the special operating condition #1 as specified on construction permit BNPFT-20180509ADJ, authorizing the installation of FM translator on am station WWCA, 1270 kHz, Gary, IN. This was prepared for Relevant Radio, Inc.

1. Concerning operation and measurements for WWCA, after installation of the FM antenna and associated transmission line on the AM tower, WWCA's antenna system was adjusted back to currently licensed parameters, and is operating as such. Due to the change above the base insulator after the installation, tower impedance measurements were done on all towers, and a method of moments proof is in progress to re license under the new rules. No changes to the existing tower sampling have been made, as of yet.
