

Multiple Ownership Compliance:

The stations that are the subject of this application are not licensed or rated in any Nielsen Audio Metro market, and accordingly compliance is measured by the interim contour-overlap methodology. Neither Assignee nor any party holding any attributable interest in Assignee holds any attributable interest in any stations whose principal community contour overlaps the principal community contour of any of the stations that are the subject of this application. The principal community contours of the two stations that are the subject of this application overlap and accordingly, form a single market for multiple ownership analysis. This application therefore seeks approval for the combined ownership of only a single AM and single FM station in the same market. Pursuant to Section 73.3555(a)(1)(iv) of the Commission's rules, combined ownership of a single AM and single FM station is allowed in markets of any size, and accordingly this application complies with the multiple ownership rules.
