

STATEMENT AS TO CURRENT STATUS OF STATION

FM Translator Station W266CU rebroadcasts the signal of Station WFAD(AM), Middlebury, Vermont (FIN: 53612).

Station WFAD is currently silent. On August 19, 2021, WFAD was forced to cease operations when several critical tuning components failed in WFAD's antenna tuning unit. Replacement equipment are not easily procured as they must be custom ordered and built to unique specifications. As soon as the replacement items are received and the system fully tuned, the licensee will restore WFAD's broadcast operations to licensed operating parameters.

Once WFAD resumes operations, W266CU will resume its rebroadcasts of the output signal of WFAD.
