

**Antenna Pattern Rotation**  
**K258BN Verdi**

At the time the construction permit was filed for and granted in CDBS, that system allowed us to specify the antenna pattern rotation at 195 degrees True.

When filing the license application now in LMS, we have visibility to the unrotated standard pattern, but do not have visibility to the antenna pattern rotation.

This exhibit is therefore included to confirm that the pattern is and should be rotated 195 degrees from True North.
